INTRODUCTION

The 1998 Newark Kids Count data report is the third annual snapshot of child well-being in Newark, New Jersey. Through support from the Annie E. Casey Foundation, The Prudential Foundation and the Healthcare Foundation of New Jersey, Association for Children of New Jersey (ACNJ) presents the most recent data available to highlight the status of Newark's children. Although the data report does track several indicators and illustrates certain short term trends, Newark Kids Count 1998 does not provide analysis on the data or indicators documented in the report.

Newark's children face challenging conditions which shape their outcomes and impact the future of the city. By giving children a voice through statistics, Newark Kids Count serves as a resource for citizens, policymakers and elected officials so that they can monitor the well-being of Newark's children and implement local policies and activities which support their needs.

ACNJ is committed to producing Newark Kids Count so that it can capture incremental and sustainable positive changes for children across all indicators in the years to come. We must continue to broaden our awareness on the issues confronting Newark's children and create a city where all KIDS COUNT.

To show a child what has once delighted you, to find the child's delight added to your own, so that there is now a double delight seen in the glow of trust and affection, this is happiness.

— J. B. Priestley

The function of education is to teach one to think intensively and to think critically. Intelligence plus character—that is the goal of true education.

— Martin Luther King, Jr.

Note: Part 1 crimes are murder, rape, robbery, aggravated assault, burglary, larceny-theft and motor vehicle theft. These are indictable offenses, and are punishable with at least 1 year or more in jail. The perpetrator must go in front of a Grand Jury in the County Superior Court. Total arrests represent crimes committed by both juveniles and adults.

NEWARK'S CHILDREN ASK US TO TAKE THE *KIDS COUNT TEST...*

WHAT ARE YOU DOING TO MAKE NEWARK KIDS COUNT?

- ARE YOU WORKING TO CREATE SAFE AND FUN PLACES FOR US TO PLAY?**
- DO YOU SUPPORT QUALITY EDUCATION FOR US IN OUR COMMUNITY?**
- DO YOU CONSIDER WHAT IS BEST FOR US, NOT ADULTS, WHEN YOU VOTE?**
- DO YOU VOTE IN EVERY ELECTION?**
- DO YOU ASK US ABOUT OUR HOPES, NEEDS AND OPINIONS? DO YOU LISTEN?**
- ARE YOU SUPPORTING TEENAGERS IN THEIR TRANSITION TO ADULthood?**
- WILL YOU CREATE QUALITY AFTERSCHOOL AND SUMMER PROGRAMS FOR EVERY CHILD?**
- DO YOU READ TO US EVERYDAY AND TAKE US TO THE LIBRARY?**
- DO YOU TALK TO YOUR LOCAL AND STATE LEGISLATORS ABOUT OUR NEEDS?**
- ARE YOU WORKING TO MAKE OUR NEIGHBORHOODS AND SCHOOLS SAFE FOR US TO LIVE AND LEARN?**
- DO YOU DEMAND POLICIES AND PROGRAMS THAT SUPPORT AND PROTECT US?**
- ARE YOU AN ADVOCATE FOR NEWARK'S CHILDREN?**

GLOSSARY/SOURCES

Acquired Immune Deficiency Syndrome (AIDS) - Number of cases of children under 18 reported to the NJ Department of Health and Senior Services as of June 30, 1996, September 30, 1997, and December 31, 1998 (NJ Division of AIDS Prevention and Control, HIV/AIDS Surveillance Program, NJ Department of Health and Senior Services).

Birth Data - The 1996 birth data is from a preliminary 1996 data file. All births to New Jersey residents may not be included in these preliminary numbers (Center for Health Statistics, NJ Department of Health and Senior Services).

Births to Teens - The number of women under 15 and 15-19 who gave birth in 1994, 1995 and 1996 (NJ Department of Health and Senior Services). Children born to adolescents are more likely to be of low birth weight, to have health problems, and to suffer child abuse and neglect. Adolescent parents have fewer educational and career opportunities, thus perpetuating poverty for themselves and their children.

Child Abuse and Neglect - The number of substantiated abuse and neglect cases in 1994, 1995, 1996 and 1997. Data in 1996 may reflect changes in DYFS case handling standards. Modifications to case handling at screening and intake-due primarily to workers' new consciousness of risk to children living with substance abusing parents-has increased the proportion of reports classified as abuse and neglect relative to those classified as family problems. (Division of Youth and Family Services, NJ Department of Human Services). A substantiated case is determined when a DYFS social worker establishes that a child has been physically, sexually, mentally, or emotionally abused by a parent, guardian or other adult who has control or custody of the child, and that the abuse can cause or create a substantial risk of impairment or death to the child ("Children at Risk 1993 and 1994", "Children at Risk 1995 and 1996").

Child Deaths - The number of children ages 1-14 who died in 1994, 1995, and 1996 (NJ Department of Health and Senior Services). Over one-third of child deaths are caused by

motor-vehicle related injuries, infectious diseases, and other injuries, including those related to fires. These causes are related to risks in families and communities, such as the lack of well-developed interventions and services. (See Death Data). Note: Most counties and cities have relatively low numbers of child deaths.

Children Receiving Aid to Families with Dependent Children (AFDC)/Temporary Assistance to Needy Families (TANF) - The number of children receiving AFDC benefits in 1996-January, February, March average. The number of children receiving TANF benefits in 1997 and 1998-March, July, November average (NJ Department of Human Services).

Children Receiving Food Stamp Benefits - The number of children receiving Food Stamp benefits in 1996-January, February, March average; 1997 and 1998-March, July, November average (NJ Department of Human Services).

Children Receiving Free and Reduced Lunch/Breakfast - Number of school age children participating in the National School Lunch Program. This benefit is based on family income guidelines and is not offered in every school district (Newark Public Schools, Bureau of Child Nutrition, NJ Department of Education).

Early Warning Test (8th Grade Students) - Used as a primary indicator for identifying students who may require instructional intervention in the areas of reading, writing, and math. 1997-1998 figures were calculated using NJ School Report Card data. (Newark Public Schools, NJ School Report Card 1997-1998 Update, NJ Department of Education).

Density - Number of people per square mile (Newark Police Department, U.S. Department of Commerce, Bureau of Census Data, 1990).

Death Data - The 1994, 1995 and 1996 death data are from preliminary files. All 1994, 1995 and 1996 deaths may not

be reflected in the preliminary data (Center for Health Statistics, NJ Department of Health and Senior Services).

Family Problems - The number of cases of identified risk in 1994, 1995, 1996 and 1997. Data in 1996 may reflect changes in DYFS case handling standards. Modifications to case handling at screening and intake-due primarily to workers' new consciousness of risk to children living with substance abusing parents-has increased the proportion of reports classified as abuse and neglect relative to those classified as family problems (Division of Youth and Family Services, NJ Department of Human Services). Cases identified as family problem remain open for services after family intake. Such cases are situations that affect a child's well-being and growth without rising to the statutory definition of child abuse and neglect ("Children at Risk 1993 and 1994", "Children at Risk 1995 and 1996", NJDHS).

High School Proficiency Test (HSPT) - A statewide assessment test taken in grade 11. It consists of three sections-reading, writing and math. It must be passed as a requirement for a high school diploma. Data represent cumulative percentage of enrolled, eligible students and excludes special education and limited English proficiency students (Newark Public Schools).

Human Immunodeficiency Virus (HIV) - Number of cases of children under 18 reported to the NJ Department of Health and Senior Services as of June 30, 1996, September 30, 1997, and December 31, 1998 (NJ Division of AIDS Prevention and Control, HIV/AIDS Surveillance, NJ Department of Health and Senior Services).

Infant Mortality Rate - The number of infants per 1,000 who died before their first birthday in 1994, 1995 and 1996 (Center for Health Statistics, NJ Department of Health and Senior Services). High rates of infant mortality are indicative of poor access to health care, lack of prenatal care, birth defects (including those caused by prenatal exposure to alcohol and drugs), and high rates of poverty.

Juvenile Arrest - The number of juveniles arrested (ages 10-17) in 1994, 1995, 1996, 1997 and 1998. The increase in Newark total arrests or the decline in Newark juvenile arrests could be attributed to increased numbers of police officers patrolling the city ("Crime in New Jersey, Uniform Crime Report" and Newark Police Department).

Lead Poisoning - Children who have tested at or above 20 micrograms of lead per deciliter of blood are considered to have unacceptably high levels of lead in their blood. Lead poisoning in children can lead to several health and developmental problems in life (Newark Department of Health, NJ Department of Health and Senior Services).

Low Birth Weight - Percentage of babies born weighing below 2,500 grams (5.5 lbs.) in 1994, 1995 and 1996 (NJ Department of Health and Senior Services). These babies have a higher death rate (see Infant Mortality Indicator) and are more likely to develop disabilities which create a greater need for medical services, special education, and lifelong support services.

Median Household Income - U. S. Department of Commerce, Bureau of Census, 1990.

No Prenatal Care - Percentage of all children born in 1994, 1995 and 1996 whose mothers reported receiving no prenatal medical care (Center for Health Statistics, NJ Department of Health and Senior Services). Such children are more likely to be of low birth weight (see Low Birth Weight indicator). Mothers who do not receive prenatal care have higher rates of maternal death, illness and complications, all of which have adverse implications for the child.

Out of Home Placements - The number of children placed in settings such as foster care, residential care or other out of home placements in 1995, 1996 and 1998. Newark data represent numbers as of July, 1995 and July, 1996 and 1998 (Division of Youth and Family Services, NJ Department of Human Services). Children who are placed in such a setting often lack the stability of a nurturing home life.

Per Capita Income - U.S. Department of Commerce, Bureau of Census 1990.

Population Statistics - U.S. Department of Commerce, Bureau of Census, Census Data, 1990, 1997.

Poverty Level - Defined by the U.S. Department of Health and Human Services as the threshold for the distribution of AFDC/TANF and Food Stamp Benefits.

Registered Voters - Commissioner of Registrations Office, County of Essex, as of October 23, 1996, September 22, 1997 and January 27, 1999.

Sexually Transmitted Diseases - Reported cases of sexually transmitted diseases for children under 19 to the NJ Department of Health and Senior Services for 1995, 1996 and 1997. In 1995 the reported cases of chlamydia and gonorrhea were obtained from documented lab tests of children receiving treatment. The 1996 reported cases of chlamydia and gonorrhea were obtained directly from the lab reports regardless of whether children received treatment. In other words, the 1996 and 1997 data show all reported cases, not just those receiving treatment (Sexually Transmitted Disease Control Program, NJ Department of Health and Senior Services).

Student Population - Number of students and ethnic breakdown in the Newark Public Schools in 1995, 1996 and 1997. (Newark Public Schools)

Teen Deaths - The number of adolescents (ages 15-19) who died in 1994, 1995 and 1996 (Center for Health Statistics, NJ Department of Health and Senior Services). A high percentage of adolescent deaths are caused by motor vehicle-related injuries, homicide, suicide, and other high risk behaviors. These causes are associated with risks in their families and communities, such as the lack of well-developed interventions and services. (See Death Data). Note: Most counties and cities have relatively low numbers of teen deaths.

Unmarried Mothers - Percentage of births in 1994, 1995 and 1996 to unmarried mothers. (NJ Department of Health and Senior Services)

Vaccination Coverage Levels - Percent of two year old children receiving the complete series of 4 doses of the diphtheria, tetanus and pertussis vaccine; 3 doses of the poliovirus vaccine; and 1 dose of the measles-mumps-rubella vaccine. Two-year olds are defined as children ages 19-35 months (Center for Disease Control, Morbidity and Mortality Weekly Report, June, 1996, July, 1997, and July, 1998).

Wastes Sites - Number of reported wastes sites to the Agency for Toxic Substances and Disease Registry (ATSDR), HazDat as of April 30, 1996 and November 20, 1997. 1998 data as of January 26, 1999 and may include early 1999 data. These listed sites may not necessarily be hazardous to the public. Anyone concerned about the hazardous or nonhazardous status of a particular site should contact the ATSDR.

Water Lead Levels - The acceptable limit for lead in drinking water is 0.0150 mg of Lead per 1 L of water (Division of Sewers and Water Supply, Newark Department of Water and Sewer Utilities).

WIC - A special supplemental food program for women, infants, and children which provides food and nutrition screening and education to at-risk, low-income pregnant women, new mothers, infants and children under age five. Data is for the quarter ending June 30, 1996, the quarter ending June 30, 1997 and the quarter ending June 30, 1998 (NJ Department of Health and Senior Services).
